

SPECIAL PROJECT

I - FORKLIFT OPERATOR CONTROL AND SYSTEM

The biggest problem in running the forklifts, forklift truck keys are used for every forklifts. To avoid this we create Forklift Control (Operation) System Card reader is connected to the battery instead of forklift's key in the system.

Forklift Control (Operation) with the system;

- Unauthorized use of the forklift is blocked.
- The product is also used to operate the cards in the company staff without the need for a key or a new card .If the operator leaves the forklift running, it can be turned off automatically with the times adjusted.
- Any operator; Located in the business does not need to separate cards to run multiple truck. Truck informations that can operator runs are loaded to his staff card.
- Unnecessary fuel-energy consumption is prevented.
- Unnecessary work place accidents that caused by forklifts working unneeded and harm to the environment due to unnecessary energy consumption is prevented.

II - PRODUCTION LINE CONTROL SYSTEM

- Production line with the Multi-user support is no restriction on the user control.
- One or more terminal identification can be made for each production line.
- Employee information is stored in the program; list of personnel sub-department lists and etc.reports can be obtained.
- Which staff works in which band for how much time can be reported.
- All reports in xls, can be saved in pdf format.
